                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Missing: In PMWK16; retained in cytosol. Missing of function. AG->DD: Abolishes cytotoxic activity. AG->DD: Abolishes cytotoxic activity.
    INDUCTION: During anaerobic growth. Weakly or not expressed in most strains. It is activated by slyA, while it is silenced by H-NS. Its expression is also regulated by CRP and FNR. PTM: In periplasm, it forms a disulfide bond between Cys-86 and Cys-284, which prevents the oligomerization. In outer membrane vesicles, the redox status prevents formation of the disulfide bond, leading to oligomerization and pore formation.
                                                                                                                                                                                                                                                                                                                                                                                                                 Potential.
In monomeric form.
K -> R (in strain CH9802).
G -> A (in strain CH9802).
GVA->DVD: Abolishes cytotoxic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NA->DD Abolishes cytotoxic activity. PTM: In periplasm, it forms a disulfide bond, which prevents the prm: In opering membrane vesicles, the redox status oligomerization. In outer membrane vesicles, the redox status prevents formation of the disulfide bond, leading to oligomerization and pore formation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TRAINSO157:H7 / EHEC;

SRP68 binds the 7S RNA, SRP72 binds to this complex subsequently. This ribonucleoprotein complex might interact directly with the docking protein in the ER membrane and possibly participate in the elongation arrest function (By similarity). SUBUNIT: Signal recognition particle consists of a 7S RNA molecule of 30 nucleotides and six protein subunits: SRP72, SRP68, SRP54, SUBCELLUAR LOCATION: Cytoplasmic (By similarity). SIMILARITY: Belongs to the SRP68 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FRCFYMASSYSALHKYSEAAALFDRTVSRVQDAEGKL----KKLKSSSFITNETOSSLN

Science 273:1058-1073(1996).
-!- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease and ATP-dependent double-strand-specific 3'-5' exonuclease activity. Rad50 provides an ATP-dependent control of mrell by activity. Rad50 provides an ATP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STRAIN=JAL-1 / DSM 2661 / ATCC 43067;

-!- COFACTOR: Binds 1 zinc ion per heterotetramer (By similarity).
-!- SUBUNIT: Heterotetramer composed of two mrell subunits and two rad50 subunits (By similarity).
-!- SIMILARITY: Belongs to the SMC family. RAD50 subfamily.

-1- SIMILARITY: Contains 1 Fs/8 type c domain.
-1- GAUTION: The partially purified protein from strain CPN50 is approximately 70 kDa smaller than the sequence indicated here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  84;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Foloury Constrain CPN50).
